# Profile System EMPS

## Complete system

The EMPS profile system is specially developed for both functional and decorative automatic sliding doors with demand on high quality. The system is based on more than 25 years of slim line door profile systems.

The system comprises slim line aluminium profiles resulting in doors framed all around and complete weather sealed.

The system can easily be calculated and quick assembled into a finished door. The EMPS is based on dry glazing and does not require any silicon sealants and thus no waiting time.

## Easy assembled

It is suitable for most type of doors and sizes such as bi-parting, single sliding with or without fixed side screens.

It can be wall mounted or beam mounted. It can be used for both single glass (8mm, 10mm and 12mm) and Thermo glass (20mm/22mm).
